

Editorial Preface

Articles from the Wireless Telecommunications Symposium 2016 in London, UK

Michael Bartolacci, The Pennsylvania State University, Information Sciences and Technology, Bethlehem, PA, USA

The Wireless Telecommunications Symposium 2016 (WTS 2016) was held in London, United Kingdom, in April of 2016. This conference brought together outstanding researchers from across the world with a focus on various aspects of wireless telecommunications research. In particular, topics dealt with the physical, data link, and application layers of the traditional Open Systems Interconnection (OSI) model along with a host of other areas.

Wireless telecommunications security was also a topic dealt with during the conference. All of the papers in this special issue of the International Journal of Interdisciplinary Telecommunications and Networking went through the stringent review process associated with the EDAS system used by IEEE conferences. These authors, in arrangement with the chairs of the conference, agreed to have their papers published in this journal instead of the IEEE proceedings and database. It is a welcome addition to regular submissions for the journal to include such outstanding works on wireless telecommunications.

Thank you,

Michael R. Bartolacci, Ph.D.
